YEAR WAS NORMAL IN GOLD OUTPUT

Decrease Mainly Ascribed to Conditions All Favorable for Nevada, Where Some Old . Camps Were Dull.

CALIFORNIA IS

Utah Output Decreased, but Majority of States Were at Normal.

The gold-mining industry of the United States was generally normal in 1919, according to H. D. McCaskey of the U. S. seological survey, but early figures indionte the smallest production since 1907, when the output was \$90,435,700. 1903 the output increased to \$94,560,000. in 1909 to 399,673,400, in 1910 it dropped to \$96,269,100; in 1911 it increased slight-

to \$91.585.168, according to preliminary estimates of the bureau of the mint and the geological survey.

The decrease is to be accribed mainly to Nevada, where there was a falling off of about \$4.560,000, chiefly from Goldfield and to a smaller degree from National and Seven Troughs. The great Goldfield mines produced more ore than in 1911, but the average grade treated was considerably lower, the mill at National was burned in September, and production was delayed at Seven Troughs by a cloudburst in July. On the other hand, the Manhattan, Round Mountain and Fairylew districts somewhat increased their yields.

Decrease in Calanta.

Decrease in Colorado.

A decrease in Colorado.

A decrease of \$300,000 to \$400,000 is also indicated for Colorado, where, although there was an increased production from Cripple Creek of about \$500,000, owing parity to successful drainage by the koosevelt tunnel, and an increase in gold output also from Gilpin county, there was an astimated decrease in production of about \$1,000,000 from the San Juan region, including the counties of Dolores, La Plata, Ouray, San Juan and San Miguel. The bulk of the decrease, however, was from the Camp Eird mine, in Ouray county, as the output of San Juan and Polores counties increased. In Utah and Washington decreases of gold output of \$100,000 to \$200,000 are indicated. In Montana there was probably a smaller decrease.

The production of gold was normal in

decrease.

The production of gold was normal in Asska Arizona. Idaho and New Moxico, and there was a somewhat increased output in California and Oregon. The year 1912 was most properous in South Dakotz, where the output increased about \$400,000 and was the largest in the history of the state. The great Homestake mines, as usual, made the bulk of the company owning these mines, which has been under construction for several years, was completed and in operation in 1912.

California First.

California First.

California retains first place in gold output, regalned from Colorado in 1911.

Gold Gredging continued generally active in 1912, especially in California and Alaska, where increased dredging espacity was added. The output from 120 dredges in ten states (including Alaska) in 1911 was \$10,811,582.

In the geological survey's report on gold and silver for 1911 it was shown that of the total gold production 23 per cent was derived from placers, dredging alone producting 19,9 per cent; 53.8 per cent was from gold and silver mills (22.9 per cent by smalgamation, 25.1 per cent by canidation, and 23 per cent from smelting. These proportions will probably not creatly change for 1912, except that dredging may be expected to increase somewhat and the output from chlorination will continue to decline.

A decline in prospecting has been noted in several of the western sistes and in 1911 and 1912 there was no notable disovery of new ore bodies or deposits that

in several of the western states and in 1911 and 1912 there was no notable discovery of new ore bodies or deposits that seem likely to promise immediate material increases in the domestic gold output. The largest producers are operating at probably near their maximum capacity and though steady output from them is assured, in some places, as at Goldfield, the grade of ore has begun to decline. New developments and discovery of gold deposits will in all likelihood not much more than offset such decline in grade or the exhaustion of older mines. From present knowledge there is no great prospect of an increase in gold production of the United States in 1913.

Imports of Gold.

According to estimates made for the survey by the burcau of foreign and domestic commerce the imports in 1912 comprised gold valued at \$61,490,090. The gold exported in 1912 was valued at \$48.590,090. The excess of imports over exports was about \$12,800,090. against \$20,-282,116 in 1911 and \$447,696 in 1910. This is a marked change from the condition in 1909, when the excess of exports over imports was \$38,893,858.

The gold imported in 1912 was mainly in the form of ore and bullion and a large amount came from Mexico, with Canada a close second. England France and Central and South American countries supplied the bulk of the remainder. The exports consisted of refined bullion and coin. The largest amounts went to France. South America. Canada and Japan, and smaller alipments were sent to the West Indies and other North American countries.

USUAL DIVIDEND OF THE PITTSBURG-IDAHO

The directors of the Pittsburg-Idaho company have declared the usual quarterly dividend of 4 cents a share, calling for payment of \$22,000 on January 15 to shareholders of record on January 15. The company has been earning well above dividend requirements for some time, a policy that has stood if to advantage during the past week or ten days of extreme cold weather. The water supply of the property was frozen for a time, and operations interfered with temporarily. The rising temperature is especially welcome to the various companies in that part of idaho.

GOOD GAIN IS MADE IN QUICK OUTPUT

Improvement in Quicksilver This Year.

Preliminary figures collected by H. D. McCaskey of the United States geological survey from the individual producers show that the domestic production of quicksilver in 1912 was 25,147 flasks of 75 pounds each, valued at the average San Francisco domestic price for the year, \$42.04, at \$1,057,150. A comparison of these figures with the final published survey figures for 1911 and 1916 shows a gain over the output of 1911 of 3851 flasks and over that of 1910 of 4545 flasks. Twenty mines were reported as producing in 1912, of which 15 were in California, against 22 producers in 1911, of which 15 were in California.

The production for 1912 showed a larger increase than was generally expected, but it is not thought that a correspondingly large increase can blooked for in 1912. Indeed, the reporter gradual decline in output from some of the larger ore bodies and possible unfavorable market conditions and prospects may result in a decreased output for 1913.

The production of guicksiver in Cali-

No production of quicksilver was reported from Arizona, Oragon, Utah or Washington in either 1912 or 1911. In Nevada there was a largely increased output from the Mercury mines, noar the old ione district, in Nye county, where a medern Scott furnace has been in operation, and a small production was reported from the Telluride prospect, near Beatty. Considerable prospecting and development of quicksilver deposits have been reported from Bare mountain and other localities near Beatty, and in other districts in Nevada, and the production from this state may further increase in 1912. The Shoshone mines, near lone, were not producers in 1912. In Texas the Chisos mine at Terlingua, Brewster county, continued to make a considerable production. The combined output of quicksiver in Nevada and Texas for 1912 was 4534 flasks, valued at \$190,699, against 2336 flasks.

SOMEWHAT MORE LIFE TO MINING SHARES

There was a bit more life to trading in nining stocks Thursday on the local exchange, but business yet is far from being what it was early in December The rising temperature is thawing out the optimism of the public trader, and a bit more sunshine will do a great deal towards bringing the public back to the

towards orngons the poole carchange.
Sales yesterday reached the total of 25,450 shares of stock, the market value of which was \$10,085.75. The following were the closing transactions:

NCOL'S Good Clothes 210 Main St.

Tenth of February.

DIVIDEND OF MAY

DAY IS DECLARED

The May Day was about the first Tintle company in 1912 to appreciate that is zinc ore tonnages might be brought into available (orm as a result of the wide spread in the price of spelter. When the possibilities of this zinc ore were set forth in The Tribune during the early summer there were very few, even among shareholders, who gave this new phase of the property any serious credence. But when the management began shipping its zinc tonnage to the middle west smelters, and when other began shipping its zinc tonnage to the middle west smelters, and when other had been deficits and assessments, the world began to sit up and take nouce.

Tenth of February

Mine Is Adoptable

The May Day was about the first Tintle company in 1912 to appreciate that its the management into available (orm as a result of the wide spread in the price of spelter. Will be property. One was that the doing poor work. It was stated by knowing actual mine and mill continue to the middle west smelters, and when other companies began to follow suit and earnings began pouring in where there had been deficits and assessments, the world began to sit up and take nouce.

Mine Is Adoptable.

FALSE REPORTS OF

BUTTE & SUPEI

The liquidation of a long line of the spread of the spread in the price of spelter. We shall be company is actual mine and mill continue the price of the property. One was that the doing poor work. It was stated by knowing actual mine and mill continue the price of the property. One was that the spread in the price of the spread in the price of spelter. We seem along the spread in the price of spelter. We shall be property. One was that the spread in the price of spelter. We support the spread in the price of spelter. We support the spread in the price of spelter. We support the spread in the price of spelter. The liquidation of a long line of the world price of spelter. The first section of the liquidation of a long line of the spelter. The liquidation of a long line of the spelter. The liquida

Mine Is Adoptable.

As expected by shareholders, the directors of the May Day Mining company, at their meeting Thursday afternoon, declared a quarterly dividend of 2 cents a share, which will be paid on February 10, the books closing on February 11, This calls for the payment of \$24,000, there being \$90,000 shares of stock outstanding. While no statement was issued showing the average earnings of the company, it was made clear by those acquainted with conditions that the May Day easily is earning well above dividend requirements, and with anything like adequate railroad carseries these earnings will be far more generous.

First in Many Years.

To date, the May Day company has paid \$108,600 in dividends, making the last disbursement in September, 1908. This profit money was wrong from the bodies of silver and lead ore during the paid \$108,600 in dividends, making the last disbursement in September, 1908. This profit money was wrong from the bodies of silver and lead ore during the paid years of operations from the surface to the tenth level. It was in developing these silver-lead ore bodies that the management throughout former years ran acroes the zine ore, and zine ore, herefore a lasteful and hated product.

BUTTE & SUPERIOR

The liquidation of a long line of Butte & Superior stock Thursday in the east gave rise to several rumors regarding the property. One was that the mill is the property. One was that the mill is doing poor work. It was stated by those knowing actual mine and mill conditions that there was nothing at all wrong at either. The first section of the mill is handling 600 tons of ore daily and the company is making in the neighborhood of \$200.000 monthly with only one section. The mill is doing first-class service.

Mining Notes.

Mining Notes.

John Dern has returned from a business visit to Nebraska.

C. H. Doolittle, general manager of the Bingham-New Haven company, accompanied by Mrs. Doolittle, leaves Saturday for a trip to Honolulu.

An assessment of 1 cent a share has been levied by the directors of the Columbus Extension Mining company.

A. L. Jacobs, the well-known broker, who spent the holiday season on the coast, reached home just in time for the freeze-up.

The Thompson-Quincy company has

WINGFIELD IS ONE ROCHESTER CONVE

George Wingfield is the latest to the merits of the new Rochester of Nevada, having acquired a les the property adjoining the Neuzel the min is doing first-class serverse. The wire gossip had it yesterday that Hayden, Stone & Co. were the largest sellers of this issue and this occasioned additional uneasiness, although the report that this firm was selling was not confirmed.
